# GRID OF THE FUTURE:

## MEMBERS LEADING THE CHANGE AND TIME OF USE

Our members are changing the way they use energy. The widespread replacement of fossil-fuel-based applications with electric counterparts and the proliferation of new electric technologies like heat pumps and electric vehicles demonstrates this change to ever-increasing degrees. As a consumer-controlled cooperative, SMPA wants to support and enable the change that our members are presenting.

**Time of Use & Member Choice:** SMPA is looking to a Time of Use rate structure to help us cover the costs and expand member control into the future.

**Beneficial Technologies:** New efficient and smart home appliances are changing the way consumers use power and they offer a unique potential to improve the load profile of our electric cooperative.

## KEY NOTES:

The Benefits of All-Electric Homes can include:

- Improved indoor air-quality
- Decarbonization / Renewable Energy Integration
- Greater energy management & control
- Enhanced Smart Home Integration
- Zoned climate control
- Convenience & Quality-of-Life

### BENEFICIAL TECHNOLOGY:

- 1  Saves money
- 2  Benefits the environment
- 3  Improves quality of life
- 4  Fosters grid resilience
